

LOGISTICS SUPPORT (S-SERIES)

Integrated Product Support

Sonovision has proven experience in Integrated Logistic Support (ILS) and Obsolescence Management.

Over many years we have provided support for our clients on small to large projects, ranging from a single Engineer on client's premises to a full team of Suitably Qualified and Experienced Persons (SQEPs) supporting a multi-year programme.

Our experts can carry out any Logistic Support Analyses necessary to plan and optimise the lifecycle of complex system. By applying thorough processes and integrating tools based on industry standards (such as S-Series), we improve the total cost of ownership and secure the value for both the manufacturer and the end customer.

RAMS & ILS

We have been accompanying our customers for more than 25 years through a wide range of technical expertise on Reliability, Availability, Maintainability and Safety (RAMS). Working in partnership with Sonovision through our sister agency **SOM Ligeron**, which is the referent for risk control and operating safety.

SERVICES OFFER:

- RAMS studies
 - Reliability and availability studies.
 - Statistical studies and feedback analysis.
 - Safety studies.
 - Flow simulation.
- Security and software quality.
- Regulatory compliance studies.

SONOVISION
ORTEC GROUP

Sonovision prides ourselves on our ability to adjust to the changing market & provide clients with innovative, next-generation solutions to help them overcome challenges of tomorrow & seize new market opportunities.

- S1000D Technical Documentation**
We can manage, author and publish any type of S1000D compliant technical data module for maintenance. Through our convertor engine, we also can convert legacy data with virtually any format to S1000D.
- S2000M Material Management**
We provide advanced consultancy services for spare parts provisioning. Our S2000M software manages all business and technical aspects required by industries working to S-series specifications, and is able to produce illustrated part catalogs.
- S3000L Logistics Support Analysis**
We provide expertise in Logistic Support Analysis activities such as Lifecycle Cost Analysis, Level of Repair Analysis, and Obsolescence management.
- S4000P Preventive Maintenance Analysis**
We can support you in the development of scheduled maintenance plans and in-service maintenance optimisation (ISMO).
- S5000F In-Service Data Feedback**
All of our S-series capabilities and offerings are designed to collect or respond to in-service data feedback. We have invested in and developed a variety of Robotic Process Automation (RPA) applications to improve efficiency.
- S6000T Training**
From Training Needs Analysis through the ADDIE process, we deliver complete training solutions - from online or blended learning, to 'train-the-trainer' for instructor-led training utilising a range of media including extended reality (XR).
